

What is claimed is:

1. A method of reproducing a recording medium containing different types of contents, comprising the steps of:

(a) identifying all types of data written on the recording
5 medium;

(b) presenting a menu screen for selecting at least one type among the identified types; and

(c) selectively reproducing data sections corresponding to the selected type through the presented menu screen.

10 2. The method of claim 1, wherein the data written on the recording medium is grouped by at least one session.

3. The method of claim 2, wherein each session contains same type of data.

15 4. The method of claim 2, wherein data type information is written on each lead-in area placed at the head of each session.

5. The method of claim 1, wherein the menu screen includes a choice button or box for selecting all data sections of same type at a time.

20 6. The method of claim 1, wherein information indicative of same type of data sections is collectively placed in the menu screen.

7. The method of claim 1, wherein the data type represents data attribute indicative of audio, video, or text.

8. The method of claim 1, wherein the data type represents data compressing scheme.

25 9. A method of reproducing a recording medium containing different types of contents in a plurality of sessions, comprising the steps of:

(a) identifying each type of the plurality of sessions sequentially;

(b) composing type telling information based on the identified types wherein information indicative of same type of data sections
5 is to be collectively placed when the type telling information is viewed;

(c) presenting the type telling information with a choice button or box for selecting a type; and

(d) selectively reproducing data sections corresponding to the
10 selected type from a user.

10. The method of claim 9, wherein the data type represents data attribute indicative of audio, video, or text.

11. The method of claim 9, wherein the data type represents data compressing scheme.
